

Remini *Studio*

From a single result to projects that keep going,
alone or with friends

A new Remini feature for at least \$5M of NPV over 2 years

Agenda

- 01 The idea

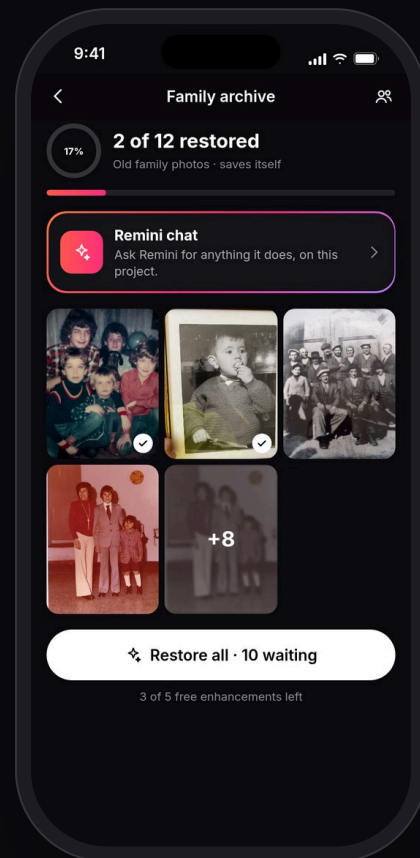

- 02 Why now: the market, Remini today and its users

- 03 Why it works

- 04 The impact

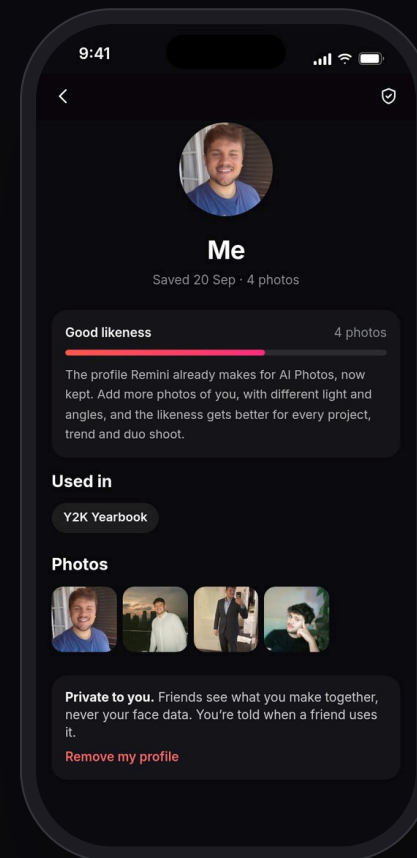

- 05 Feasibility, test and launch

Remini Studio: a personal space to create, keep and grow work, alone or with friends

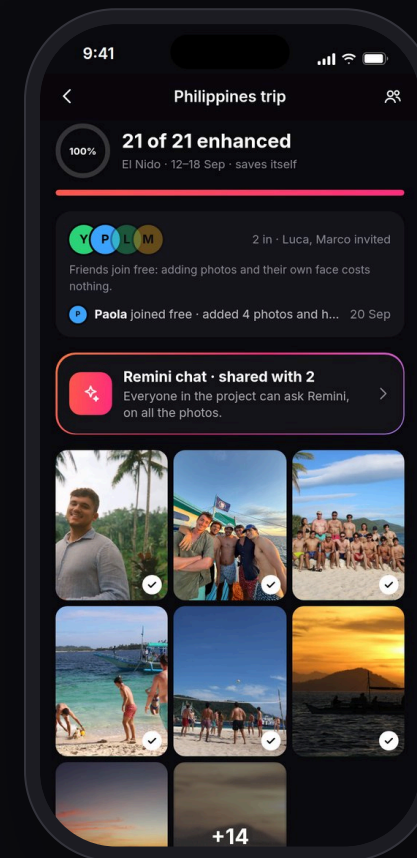

01 · PROJECTS

Jobs that keep going

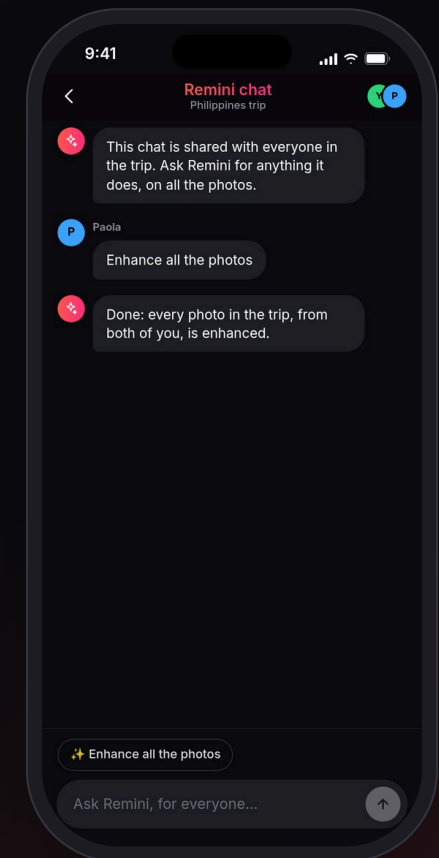

02 · PROFILES

Your face, saved and improving

03 · TOGETHER

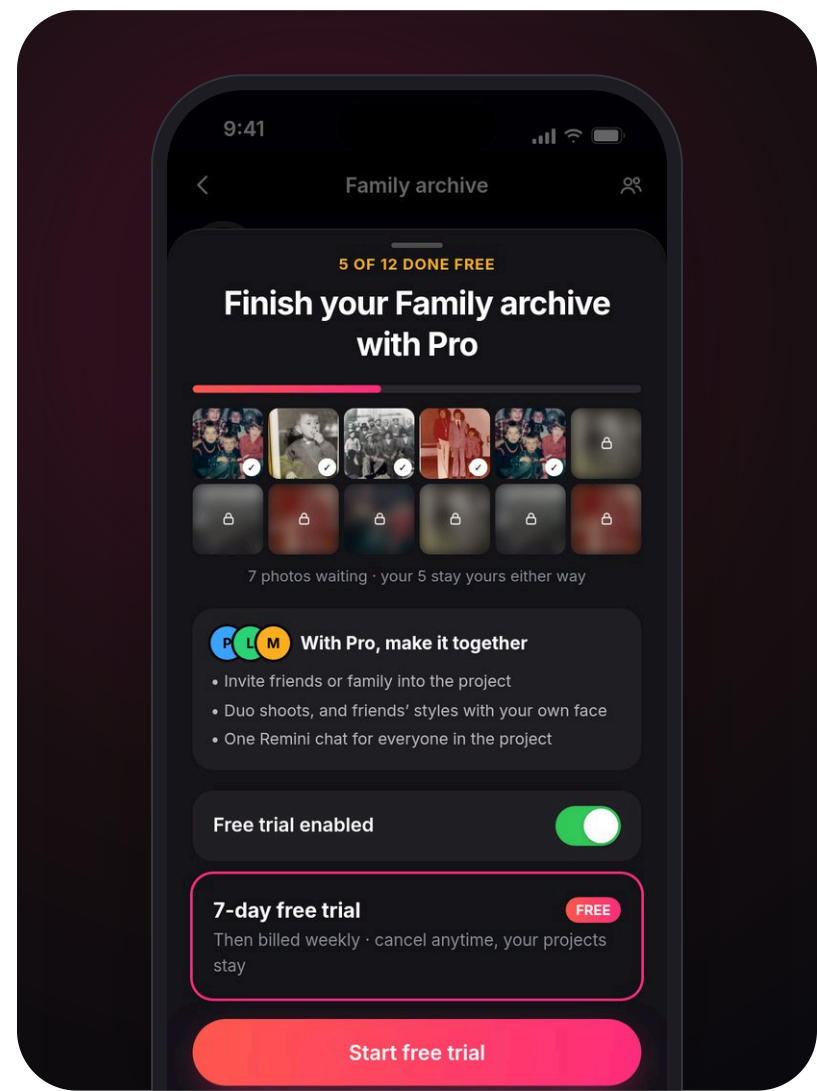

Friends join and create with you

04 · AI ACROSS IT

Remini chat in every project

The free limit lands inside a job people care about, and the Balanced scenario reaches the \$5M target

NPV OVER 2 YEARS · BALANCED SCENARIO

\$5.3M 1.06x target

- Trial start +10%
- Conversion held
- Paid weeks +6%

Single edits are easy to find, so Remini's next step is value that carries on after the first result

THE MARKET

AI edits are a commodity

Viral waves are short

New users are harder to win

Keeping revenue over time

5%

of installs start a trial: large room to grow

98%

of daily users installed earlier: a large, engaged base

4 wks

is how long subscribers stay

FIXERS

Come to improve their photos: big jobs that stop at the free limit

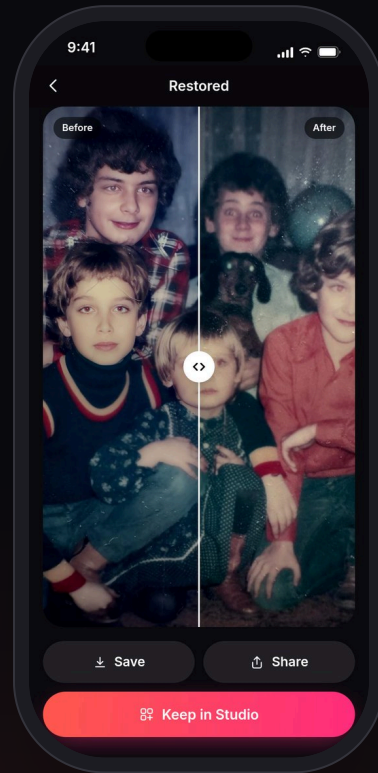

CREATORS

Come to create: small jobs that end with the trial

Both need something that carries on after the first result

WHY IT WORKS

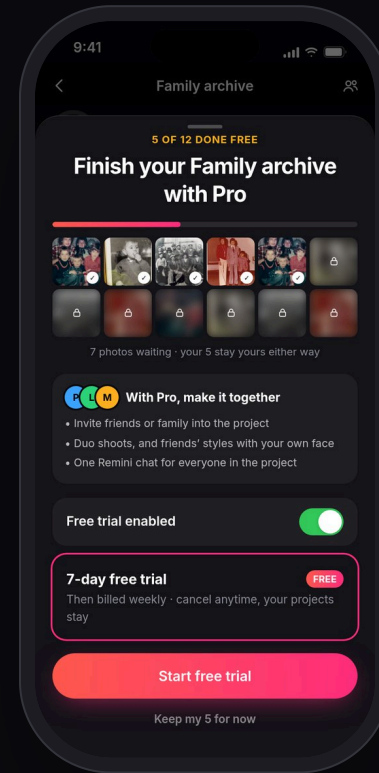

Each step of the journey moves one lever

FIRST RESULT

Keep starts a project

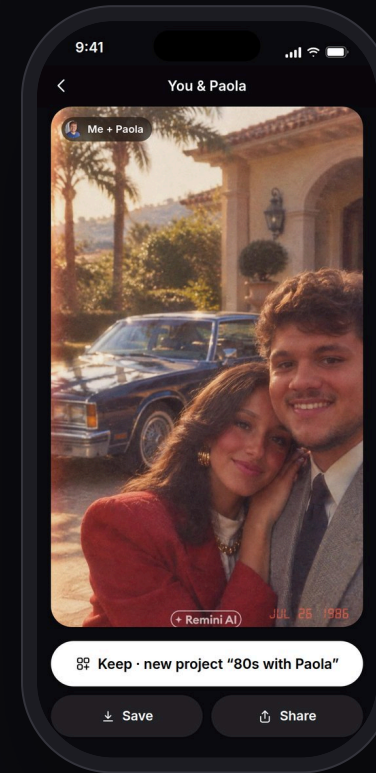

A job bigger than one edit

FREE LIMIT

It lands inside the project

● Trial start

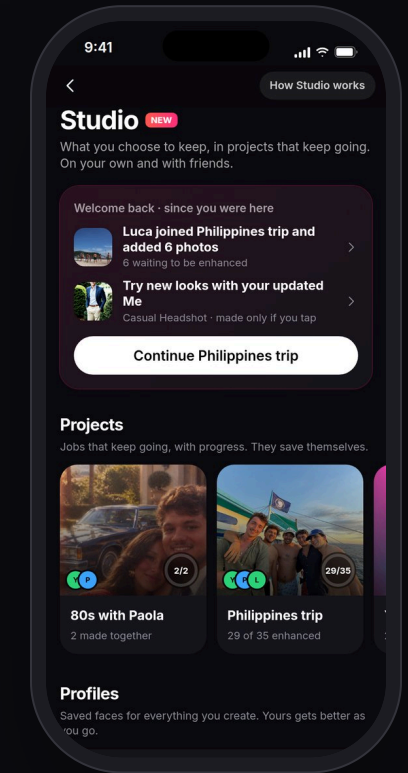

TRIAL WEEK

Together unlocks

● Conversion

● Invited installs

WEEKS LATER

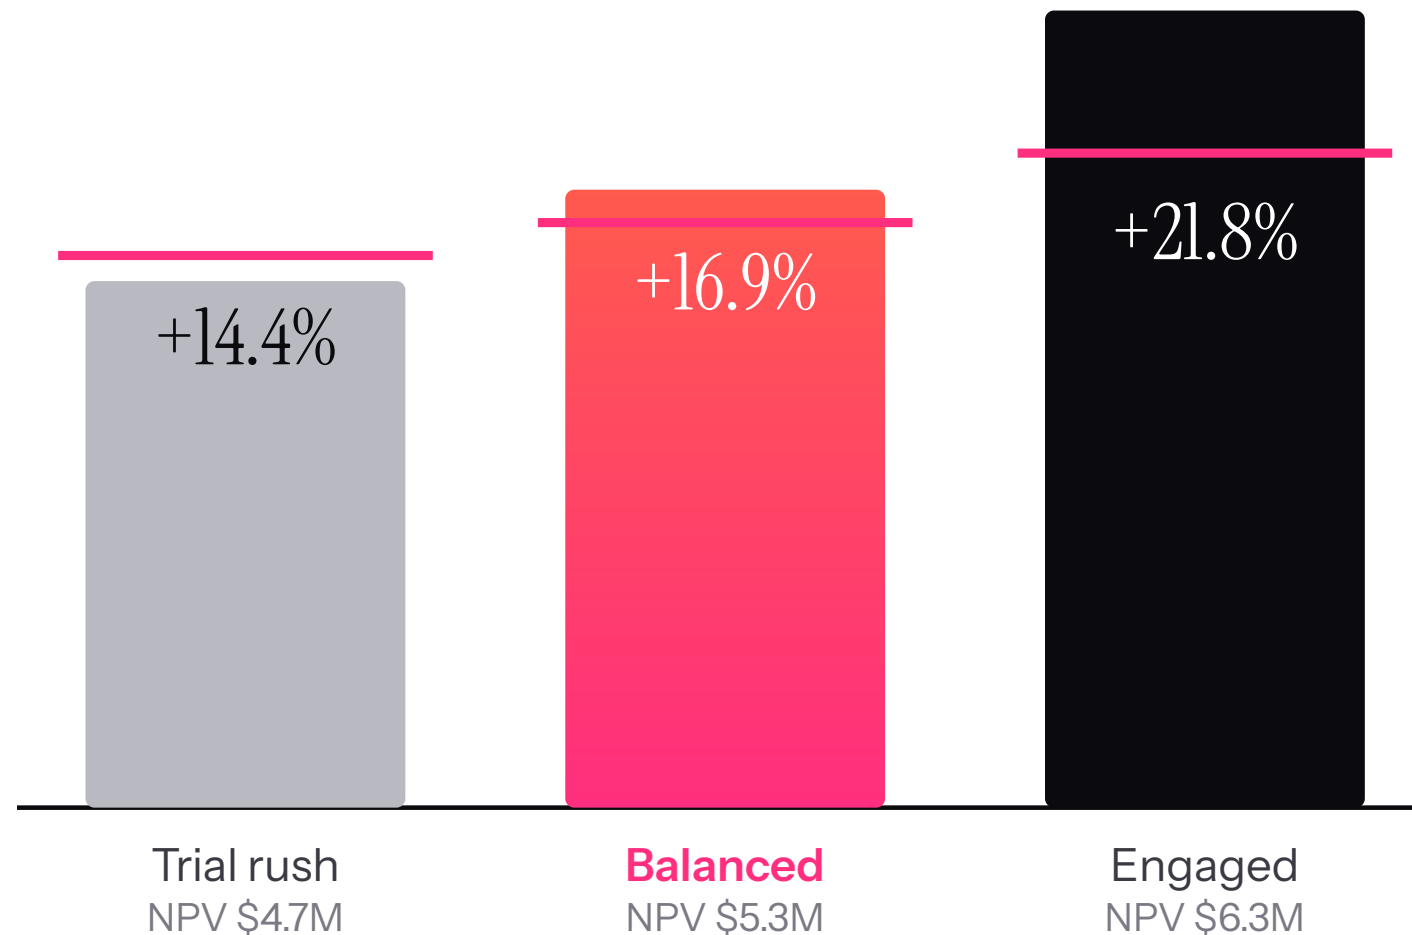

Work waiting to continue

● Paid weeks

Also: returning users find a project worth a trial, and a history of your work is hard to leave

Studio needs about 16% more revenue per install, and the Balanced scenario delivers 16.9%

Change in revenue per install by scenario, against the bar each needs for the \$5M target

— The bar for the \$5M target

CONVERSION IS THE PIVOT

More trials alone earn less: +14% vs +17%

THE REAL COST IS MARGIN

89% to 86% after AI cost

RETURNING USERS ADD \$0.8M

The least evidenced input

ANCHORED IN EVIDENCE

AI Photos lifted trials 20%; the Balanced scenario assumes half

Technically low risk, and operationally manageable with clear rules

TECHNICAL · LOW RISK

ALREADY IN REMINI

Face profiles

Enhance and AI photos

Trend packs and duo shoots

AI chat

NEW TO BUILD

Studio area and storage

Enhance all

Invites and shared projects

OPERATIONAL · CLEAR RULES

Faces

Only you add yours, and can remove it

Privacy

Same consent and deletion as AI Photos

Content

Projects private to their members

Compute

Free limits and a 7-day trial

A random test on new installs settles it within weeks

Months 1 and 2

Build

Month 3

Test on 10%

Month 4

50%

Month 5 onwards

Everyone

Roll out

Revenue per install after costs clears the bar

Improve

People use Studio, but money does not move

Stop

Neither trials nor repeat use move

Next: *the live demo*

Full *story*

- 01 Market and Remini today
- 02 Users and levers
- 03 The problem, options and choice
- 04 Remini Studio and why it works
- 05 The prototype
- 06 Launch
- 07 Impact
- 08 Technical and operational feasibility

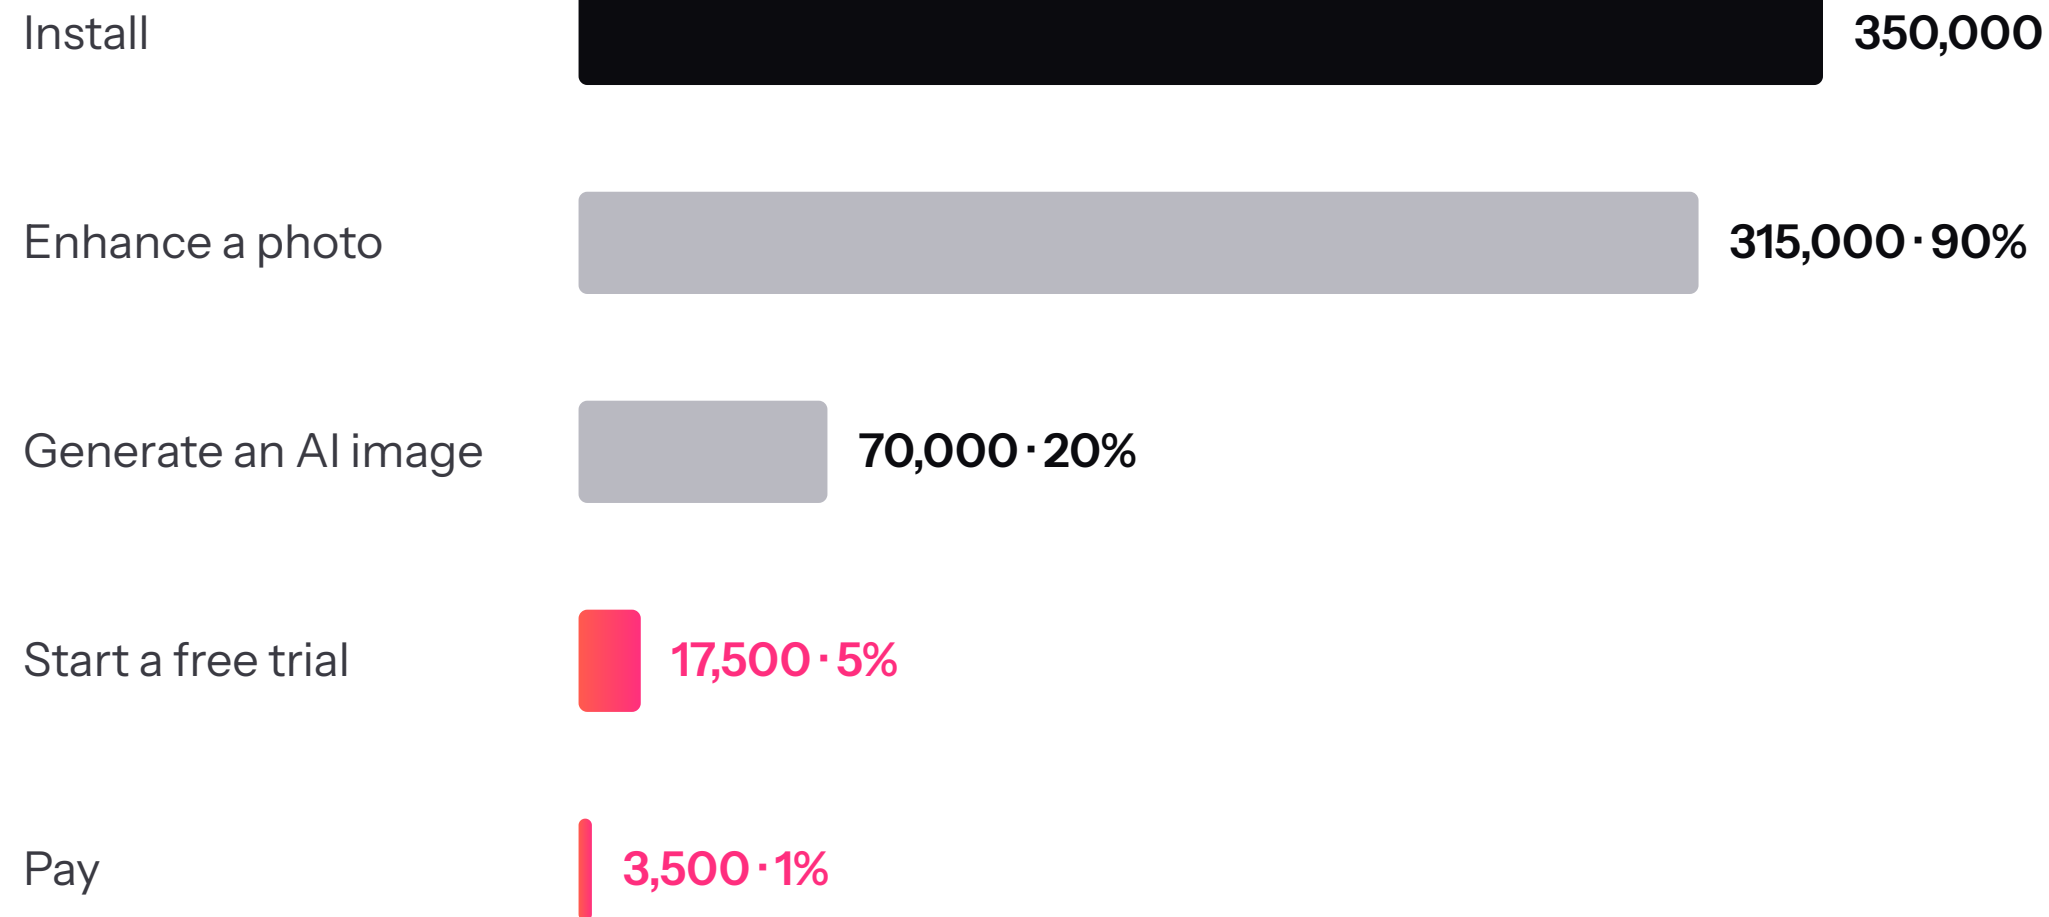

Four forces make one-off edits and viral waves a weaker base for growth

FORCE	WHAT I FOUND	WHAT IT MEANS FOR REMINI
One-off AI edits are becoming a commodity	ChatGPT's image tool added about 1M users in one hour (Mar 2025); Nano Banana brought 10M+ new Gemini users and 200M+ edits in about a week (Aug 2025)	A single effect or edit is easy to copy and increasingly free elsewhere
Viral moments are powerful but short	Remini's growth was driven by viral spikes, six of them engineered by Bending Spoons	Remini knows how to win attention, but each wave fades
New users are harder to win	Q2 2026: new users are harder to acquire while existing users behave as before	Growth that relies on more installs gets more expensive
Keeping revenue over time is the opportunity	Remini's net revenue retention averaged 87% from Q1 2023 to Q1 2026	Revenue from each group of users shrinks over time

The value has to come from giving people more reasons to use Remini and to keep paying for it

Of 350,000 installs a day, 95% never start a trial

New installs in one day, by step reached, number of people

95%

of installs never start a trial:
332,500 people a day

60% of trials start at onboarding,
40% after using the app. Payers
stay about 4 weeks

New users bring \$70,000 a day in subscriptions and ads add about \$6,300, while most daily users installed earlier

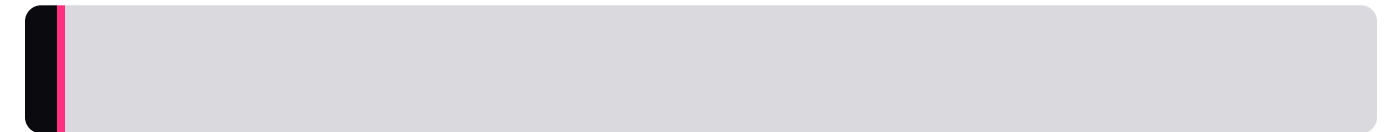

MONEY FROM NEW USERS, PER DAY

Subscriptions: $350,000 \text{ installs} \times 5\% \text{ trial} \times 20\% \text{ conversion} \times 4 \text{ weeks} \times \$5 = \text{\$70,000}$, about \$25.6M a year

Ads: $332,500 \text{ free users} \times 3.8 \text{ ads} \times \$0.005 = \text{about \$6,300}$, 8% of revenue from new users

A free user is worth cents in ads; a trial is worth about \$4 (20% × \$20)

DAILY USERS

■ **350,000** new installs a day (2.3% of 15M)

■ **About 98,000** paying at any moment (0.65%)

■ **About 98%** installed earlier; most use Remini for free

Fixers and Creators have opposite strengths, and both need something that carries on after the first result

	FIXERS	CREATORS
Why they come	To improve their photos: old family pictures, blurry shots, a backlog	To create: AI looks, trends, themselves in new styles
How many	The large majority: at least 70% of installs enhance and never generate	Up to 20% of installs
Average use	6 enhancements	1 AI image
Strength	Stay subscribed longer	Start trials more often
Weakness	Start trials less often	Leave at the end of the trial or soon after paying
What free users need	A reason to finish a big job	Jobs that grow: more photos, more people, more ideas

Each 1% on any lever is worth the same \$700 a day, and trial start, conversion and paid weeks are the easiest to move

Subscriptions = installs × trial start × conversion × paid weeks × weekly price

LEVER	TODAY	ROOM TO GROW	EASE OF MOVING IT
Trial start	5%	Large: 95% never try	Proven: AI Photos lifted it by 20%, and the lift lasted
Conversion	20% of trials	Medium: 24.3% median in comparable apps	Moderate: people need to see ongoing value within 7 days
Paid weeks	4	Medium	Hardest: people need a reason to keep coming back
Installs	350,000 a day	Large	Costly: new users are harder to win, and an extra install is worth about 22 cents. Studio grows them only through invites
Price and paywall	\$5 a week	Small	Easy to change, but moves money among people who already want Remini
Ads	8% of new-user revenue	Very small	Capped by the free allowance

The levers move together, so the change has to come from behaviour, not from forcing one number

More installs without a change in the experience mean mathematically lower conversion, with no real gain

The model shows the same with trials: the Trial rush scenario lifts trials by 20%, converts worse and earns less per install than the Balanced scenario

So Studio acts on the whole experience: trial start, conversion, paid weeks and invites together

Remini delivers great results for a single task, but offers little that carries on after it

WHERE VALUE CAN GROW

Most people use Remini and leave before a trial

Trial users often finish their task before deciding whether it is worth paying

Subscribers stop once the task is done

WHY IT MATTERS NOW

The single task is becoming a commodity

Viral waves fade

New users cost more to win, and revenue from each group of users shrinks over time

Raising the value of each user, today about 22 cents per install, is the growth path that does not depend on more installs or the next viral wave

Remixing and creating together work when tied to your own face, your friends and a purpose; feeds alone do not hold people

PRODUCT	WHAT IT DOES	WHAT I TAKE FROM IT
CapCut templates	Anyone taps "Use template" and drops in their own clips	People love reusing others' creations with their own content
Picsart Replay	Apply the exact edits another user made to your own photo	User-made recipes for photos have lasted for years
Remix (Facemix)	Puts your face into any image	Your face on others' creations exists, as a niche social network
Sora cameos	Verify your face; friends use it with your approval	1M downloads in under 5 days, then falling month after month: a feed alone does not hold people
Meta AI Vibes	A feed of AI videos to remix and share	Cold reception: remixing strangers' content without a personal purpose is weak
ChatGPT group chats	Up to 20 people creating in one chat, with profile photos	Creating together through chat is becoming normal

A personal space moves the most levers, and the right ones, for both kinds of user

OPTION	LEVERS IT MOVES	SERVES	COMMENT
A new viral trend or AI effect	Installs, trial start	Creators	Waves fade and effects are copied
Price, plan or paywall changes	Trial start, conversion	Both	Optimises current results instead of the deeper problem
A public feed of AI content	Installs, paid weeks	Creators	Similar feeds had a cold reception
A personal space to create, alone and with friends	Trial start, conversion, paid weeks, installs from invites	Both	What each person builds grows over time

It moves the most levers and the right ones (trials and conversion), serves both users and builds switching cost. The other options chase installs or only tune the paywall

Remini Studio: projects that keep going, profiles that improve, and friends to create with

01

Projects

A job that keeps going, with visible progress ("5 of 12 restored") and Enhance all for batches

New: the Studio area and storage

02

Profiles

Saved faces: yours, and friends' and family's, added by them. The base for new creations inside projects

Built on AI Photos face profiles

03

Together

Invite friends into a project, create group and duo shoots, remix creations shared with you with your own face

Built on duo photoshoots and trend packs

04

AI across it

Remini chat works inside a project and, in shared projects, for everyone in it

Built on Remini's AI chat

In order of importance. Everything made anywhere in Remini can flow into Studio, and everything in it can use the rest of Remini

After each result, people choose what to keep, and Studio shows what has moved since

Any result

Save, Share, or
Keep in Studio

A project

Photos that
belong together
become a project

Studio

Progress, new
looks on your
profiles, what
friends added

DESIGN RULES

People choose what to keep and share

The free limits stay as they are

Only a person can add their own face, and
remove it at any time

Nothing is held back after cancelling

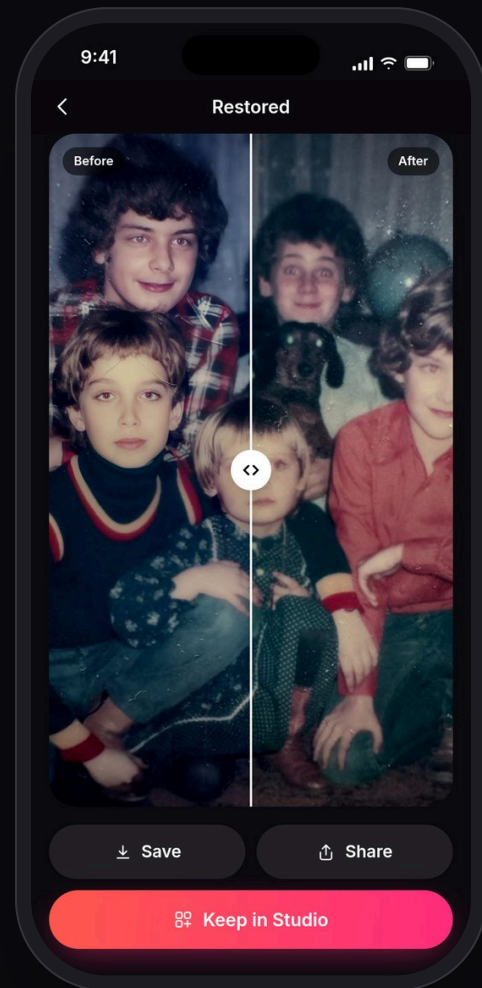

Studio is a personal space, not a public feed

Each moment of the journey is designed to move one lever

MOMENT	WHAT THE USER SEES	WHAT IT TRIGGERS
First results	"Keep in Studio", then a project suggestion when photos belong together	A job starts, bigger than one edit
Free limit	"5 of 12 done, finish your archive", with creating together in Pro	Trial start
Trial week	Together unlocked: invites, group shoots, the shared AI chat, remix	Conversion for all the new features Installs from invited friends
Paid weeks	Unfinished projects, new looks on saved profiles, friends' additions, new trends to remix	Paid weeks
After cancelling	Projects stay viewable and downloadable	A reason to come back later

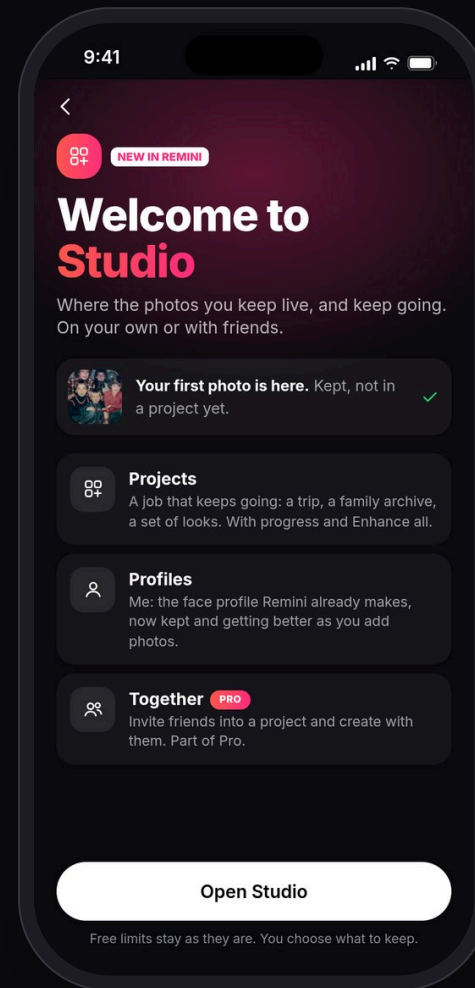

Studio and Together are showcased to free users from onboarding

Keep turns a single result into the start of a project

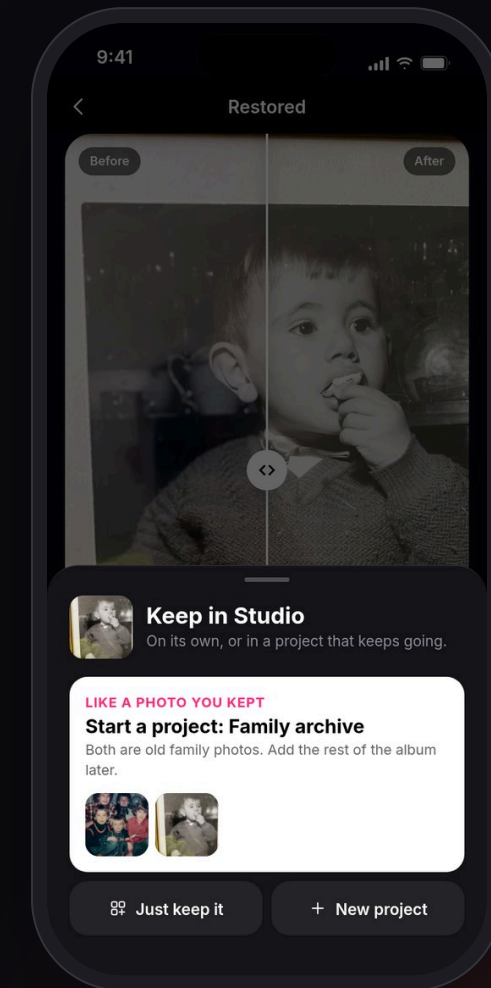

1 · KEEP IN STUDIO

Save and Share as always, plus one new button

2 · WELCOME TO STUDIO

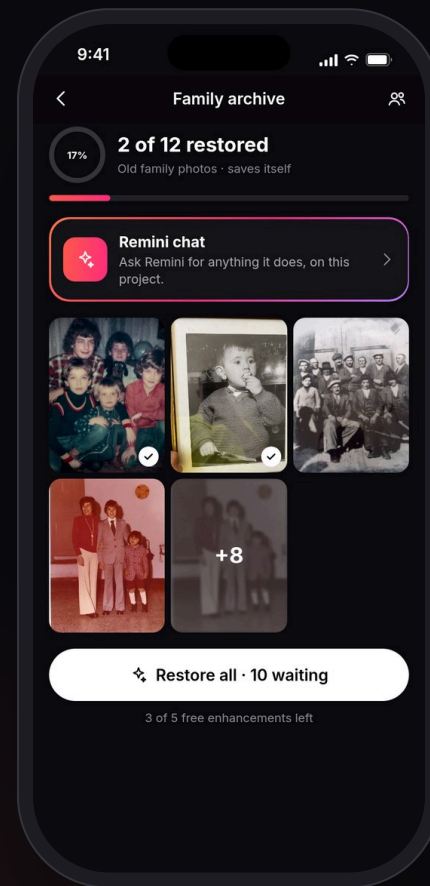

The first Keep explains Studio in one screen

3 · A PROJECT TAKES SHAPE

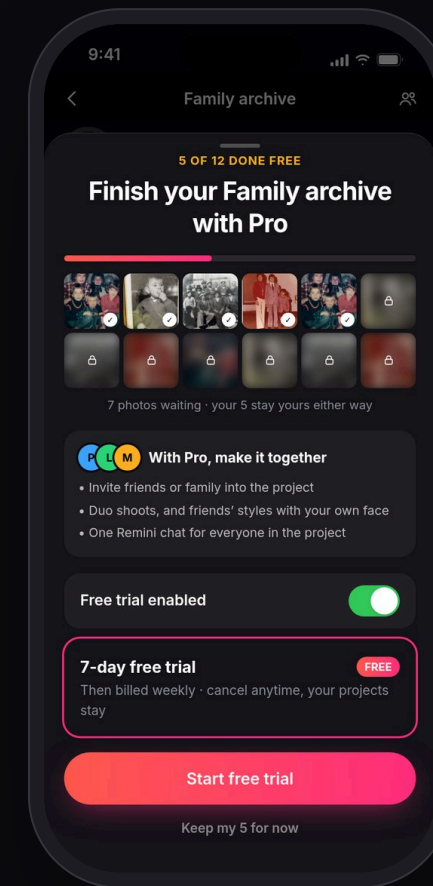

A second old photo suggests a Family archive

The free limit lands inside the project, with creating together as the reason to try Pro

1 · A JOB THAT KEEPS GOING

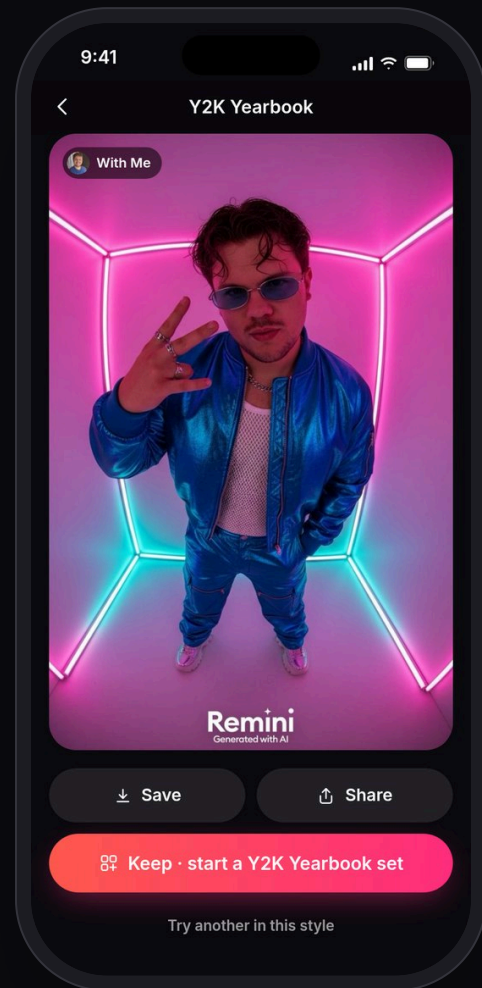

The album added: 12 photos, 2 restored, Restore all

2 · THE LIMIT, INSIDE IT

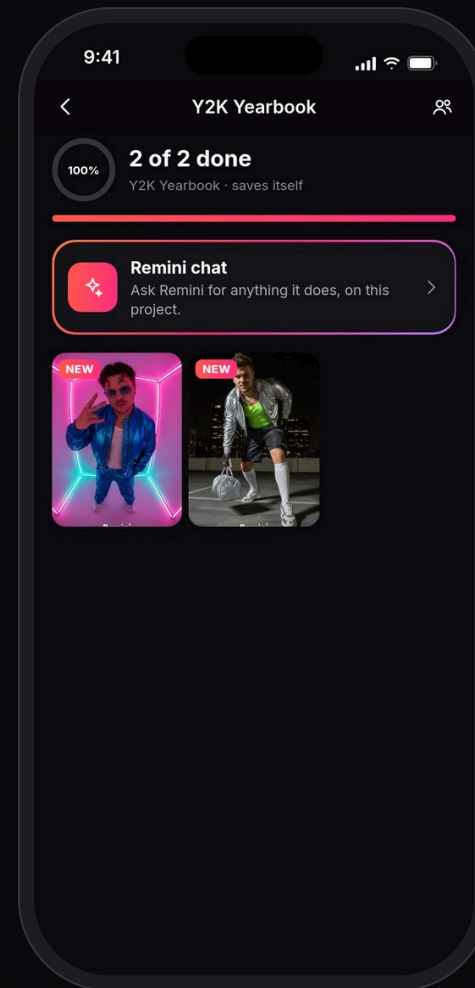

5 of 12 restored: Pro finishes it and adds Together

Me is saved once, and every new look needs no upload

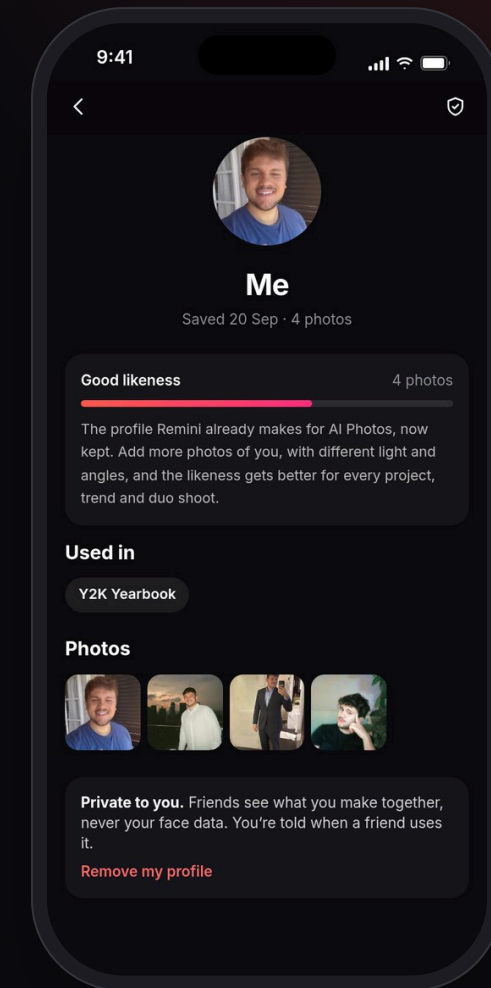

1 · A TREND WITH YOUR FACE

The first time, Me is saved from 4 selfies

2 · ONE MORE, SAME STYLE

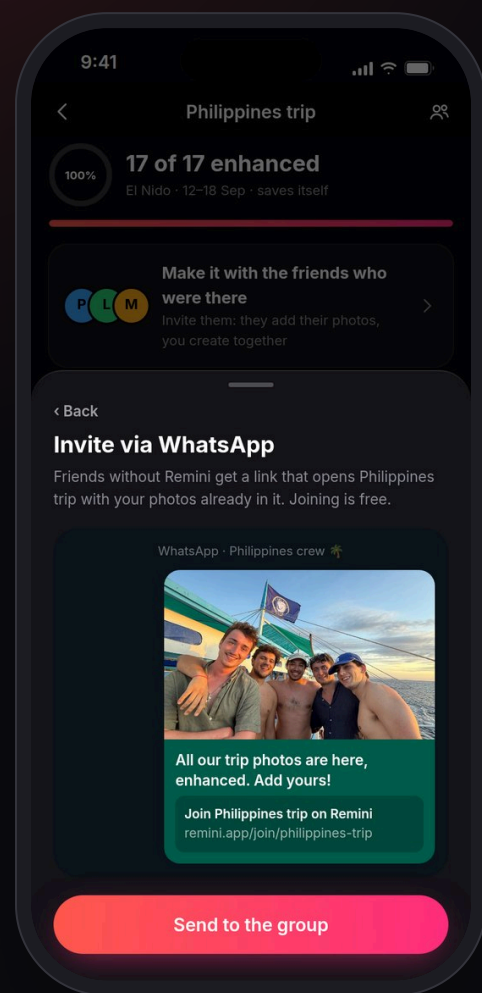

A set that stays in one style, straight from Me

3 · ME, KEPT

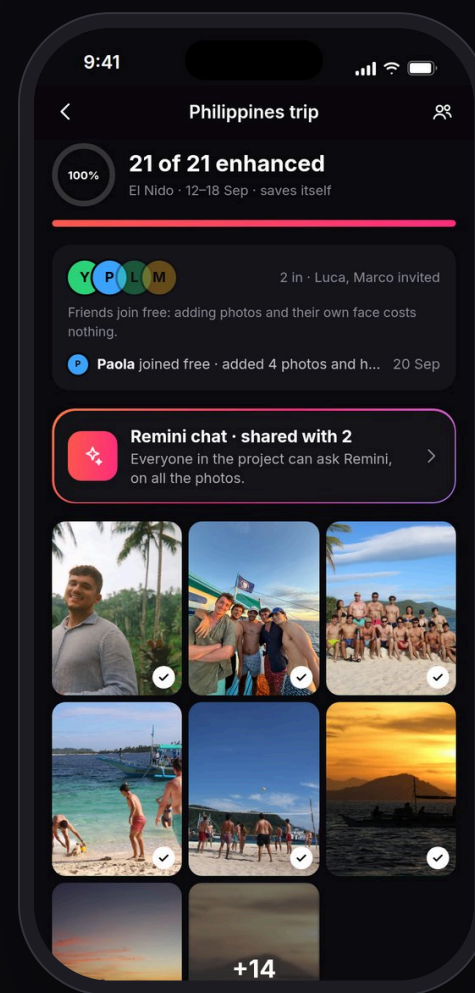

More photos of you, better likeness everywhere

Friends join a project for free and bring their photos and their own styles

1 · AN INVITE ON WHATSAPP

A link straight into the trip; joining is free

2 · PAOLA JOINS

Everyone's photos already there; she adds hers

3 · HER STYLE, A DUO SHOOT

Her 80s look with your face, then the two of you

Launch as a random test on new installs, with a clear rule to roll out, improve or stop

DESIGN

New installs split at random: Studio or Remini as it is today, everything else identical

Results split by onboarding answer: Fixers vs Creators

A small group keeps the old version for longer, to check the effect lasts

MEASURE

Trial start, conversion, paid weeks, invites, revenue per install after costs

Trial start shows within days; conversion and paid weeks within a few weeks

DECIDE

Roll out if revenue per install after costs clears the bar

Improve the design if people use Studio but money does not move

Stop if neither trials nor repeat use move

Months 1 and 2

Build

Month 3

Test on 10%

Month 4

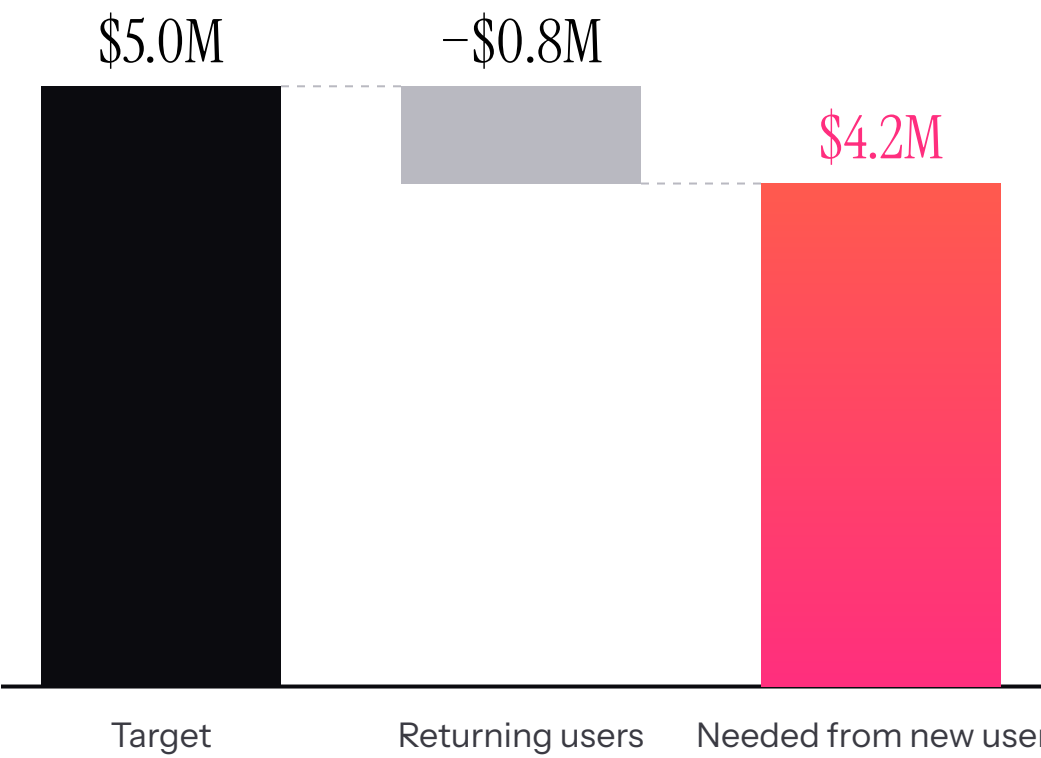

50%

Month 5 onwards

Everyone

\$5M is about 10% of two years of new-user subscriptions, but timing and cost raise the bar to about 16%

From the \$5M target to the change in revenue per install needed, at the Balanced scenario's margin

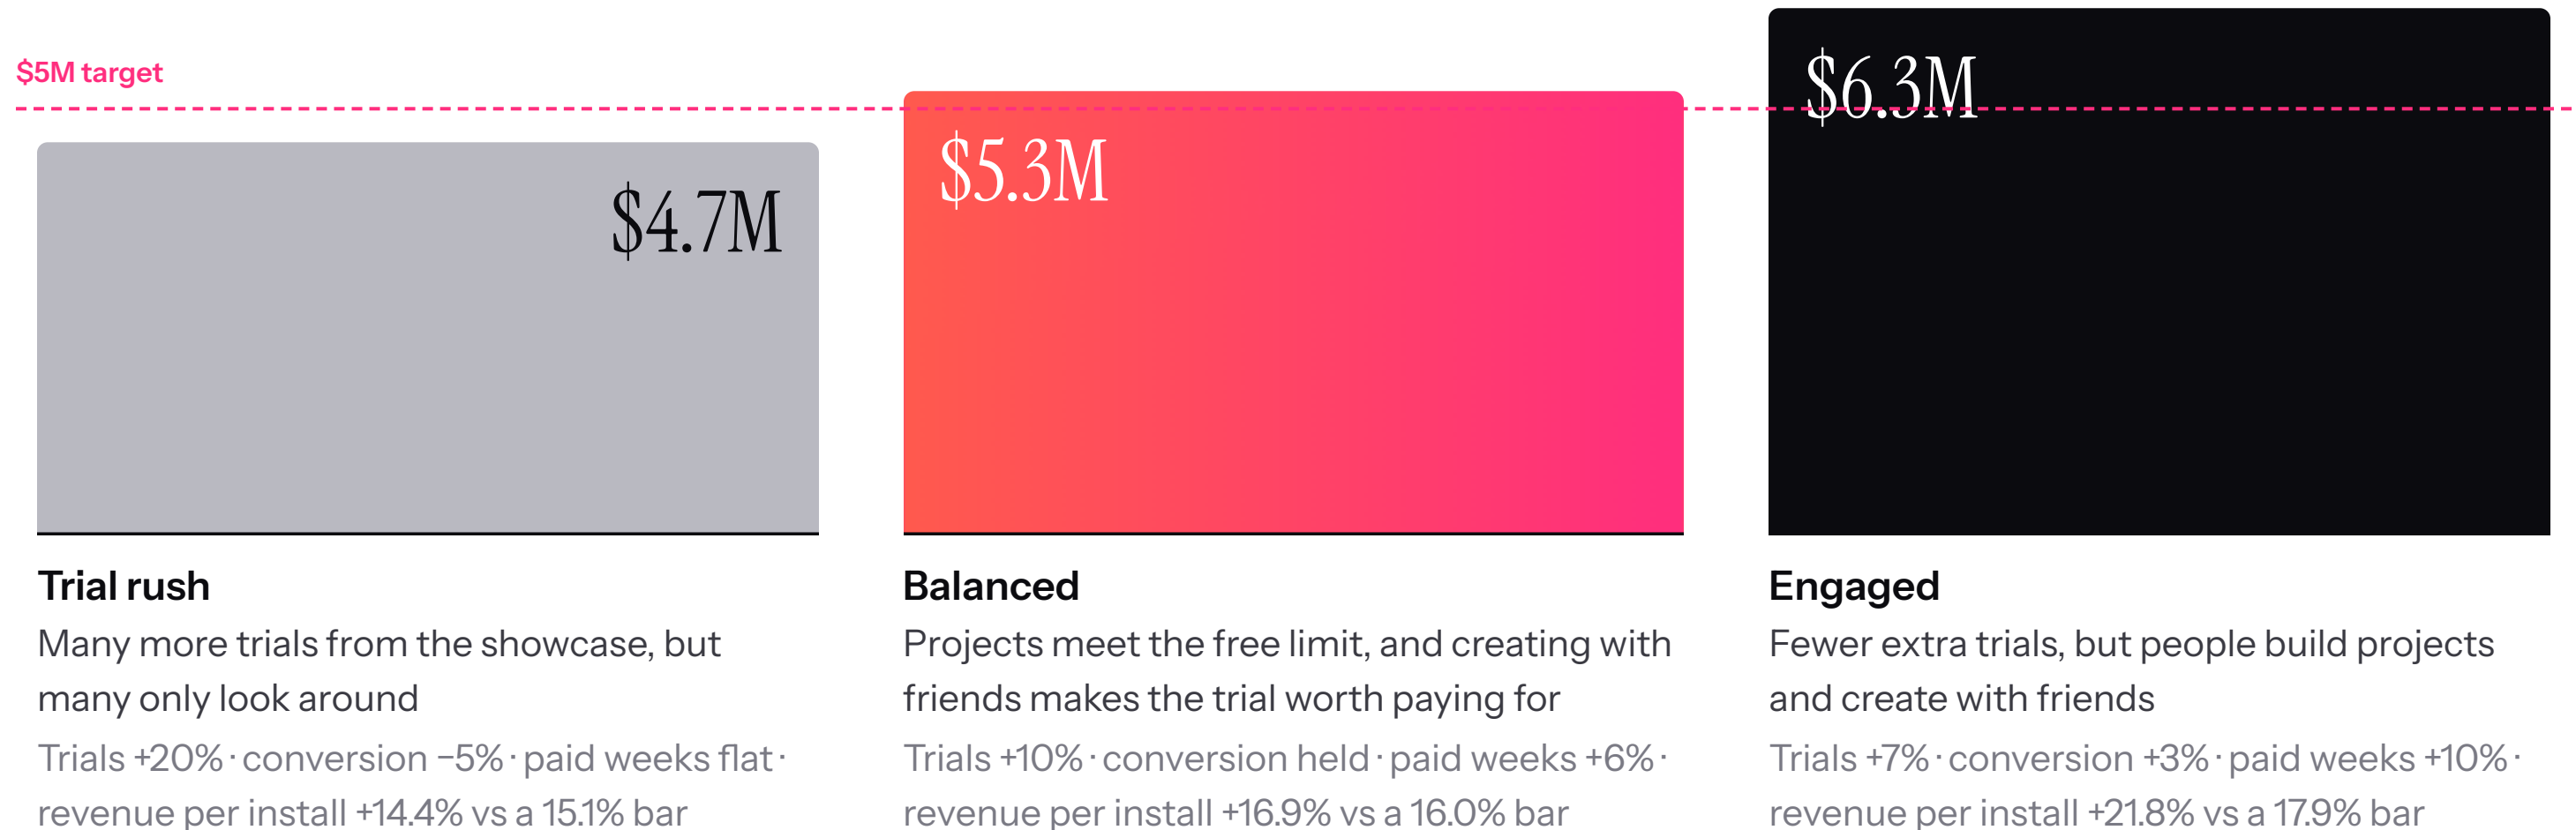

Needed per day once live	\$7,369
plus Studio's running cost, as lower margin	\$2,235
Extra subscription revenue a day, after margin	\$11,201

+16% revenue per install, on today's \$70,000 a day from new users

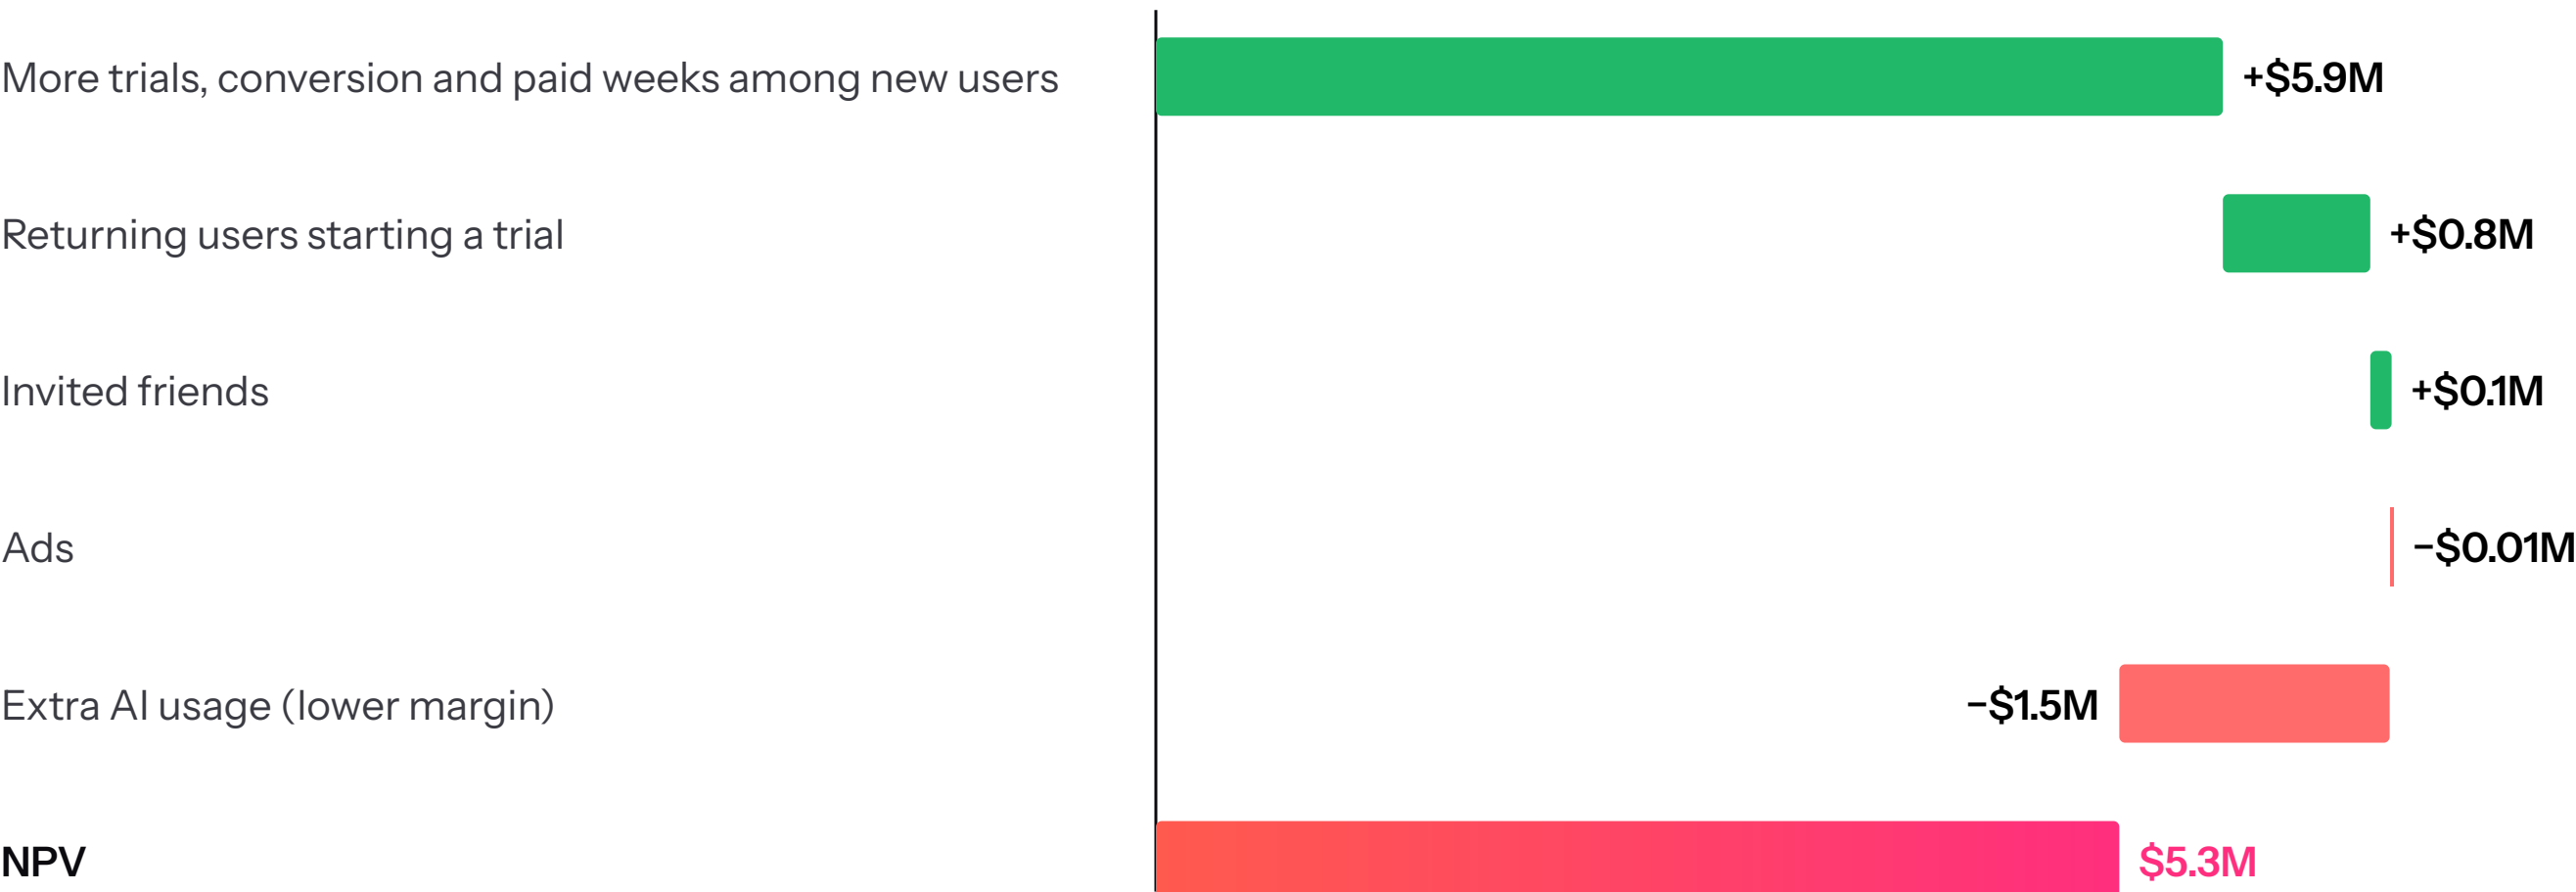

The Balanced scenario reaches the \$5M target, the Engaged scenario beats it by 26%, and the Trial rush scenario falls just short

NPV over 2 years, \$M, by scenario, against the \$5M target

In the Balanced scenario, more trials and longer subscriptions drive the value, and extra AI usage is the main cost

NPV over 2 years, Balanced scenario, \$M

Studio's real cost is margin: AI creation costs about 25 times an enhancement

AI COST PER ACTION, LIST PRICES

Enhancement: **\$0.0024**

AI image: **\$0.039** · short video: **\$0.25**

AI creation, blended (90% images, 10% videos): **\$0.060**

AI creation is 74% of AI cost in the Balanced scenario

MARGIN AFTER AI COMPUTE AND STORAGE

89% → 85.7%

From today to the Balanced scenario, worth -\$1.5M of NPV

Free limits and the 7-day trial keep usage bounded. Costs are at public list prices; Remini's actual costs are not public and may be lower

The model is deliberately simple, and what it leaves out is upside

CHOICE	HOW IT IS MODELLED
Timing	2 months to build, a test month on 10% of new installs, a rollout month at 50%, then everyone
Discounting	9% a year: an assumption, based on Bending Spoons' debt cost and the equity cost of internet software
Costs	Only what Studio adds: AI compute and storage
Paid weeks	+6% = about 1.7 paid days, under half the gap between median and top-quarter first renewal in photo apps (45% vs 53%, RevenueCat 2026)
Returning users	Assumption: 1 in 20,000 a day starts a trial, about 730 a day at launch, fading 5% a month; the least evidenced input
Invites and ads	Invites add about 0.3% more installs; ads move by a few dollars a day
Left out, all upside	Invites by invited friends, people who come back after cancelling, cheaper internal compute

Technically low risk: most of Studio already runs in Remini, and what is new is the space, the storage and the sharing

PIECE	IN REMINI TODAY	WHAT IS NEW
Face profiles	Yes, several per account in AI Photos	Reused inside projects; friends add their own
Enhance, AI photos, video, retouch	Yes	Results can go into a project
Trend packs and duo photoshoots	Yes	Run on saved profiles, including groups
AI chat	Yes	Works inside a project, shared with its members
Projects with progress	No	The Studio area and storage of results per account
Enhance all	No	Batch processing on the existing enhancement model
Invites and shared projects	No	Invite links, members, notifications
User-made styles and remix	Partly: a trend pack is already a saved recipe	Users save and share a recipe; others apply it to their own profile

Operationally manageable: faces, sharing and compute each have a clear rule

OPERATIONAL RISK	HOW I WOULD HANDLE IT
Other people's faces	Only the person can add their own face; they are notified when it is used and can remove it. Friends by invite only, like a shared album, not a public feed
Privacy of saved faces	The same consent and deletion rules as AI Photos, with a clear "delete my profile" control
Inappropriate content	Projects are private to their members; shared styles are recipes within Remini
Compute and storage cost	Grows with use; free users keep their limits and trials are time-limited. The main swing is the video share: at 30% of creations instead of 10%, the Balanced scenario falls to \$4.1M
Building it	Existing product teams, reusing existing models and profiles

Appendix

The case numbers behind the story

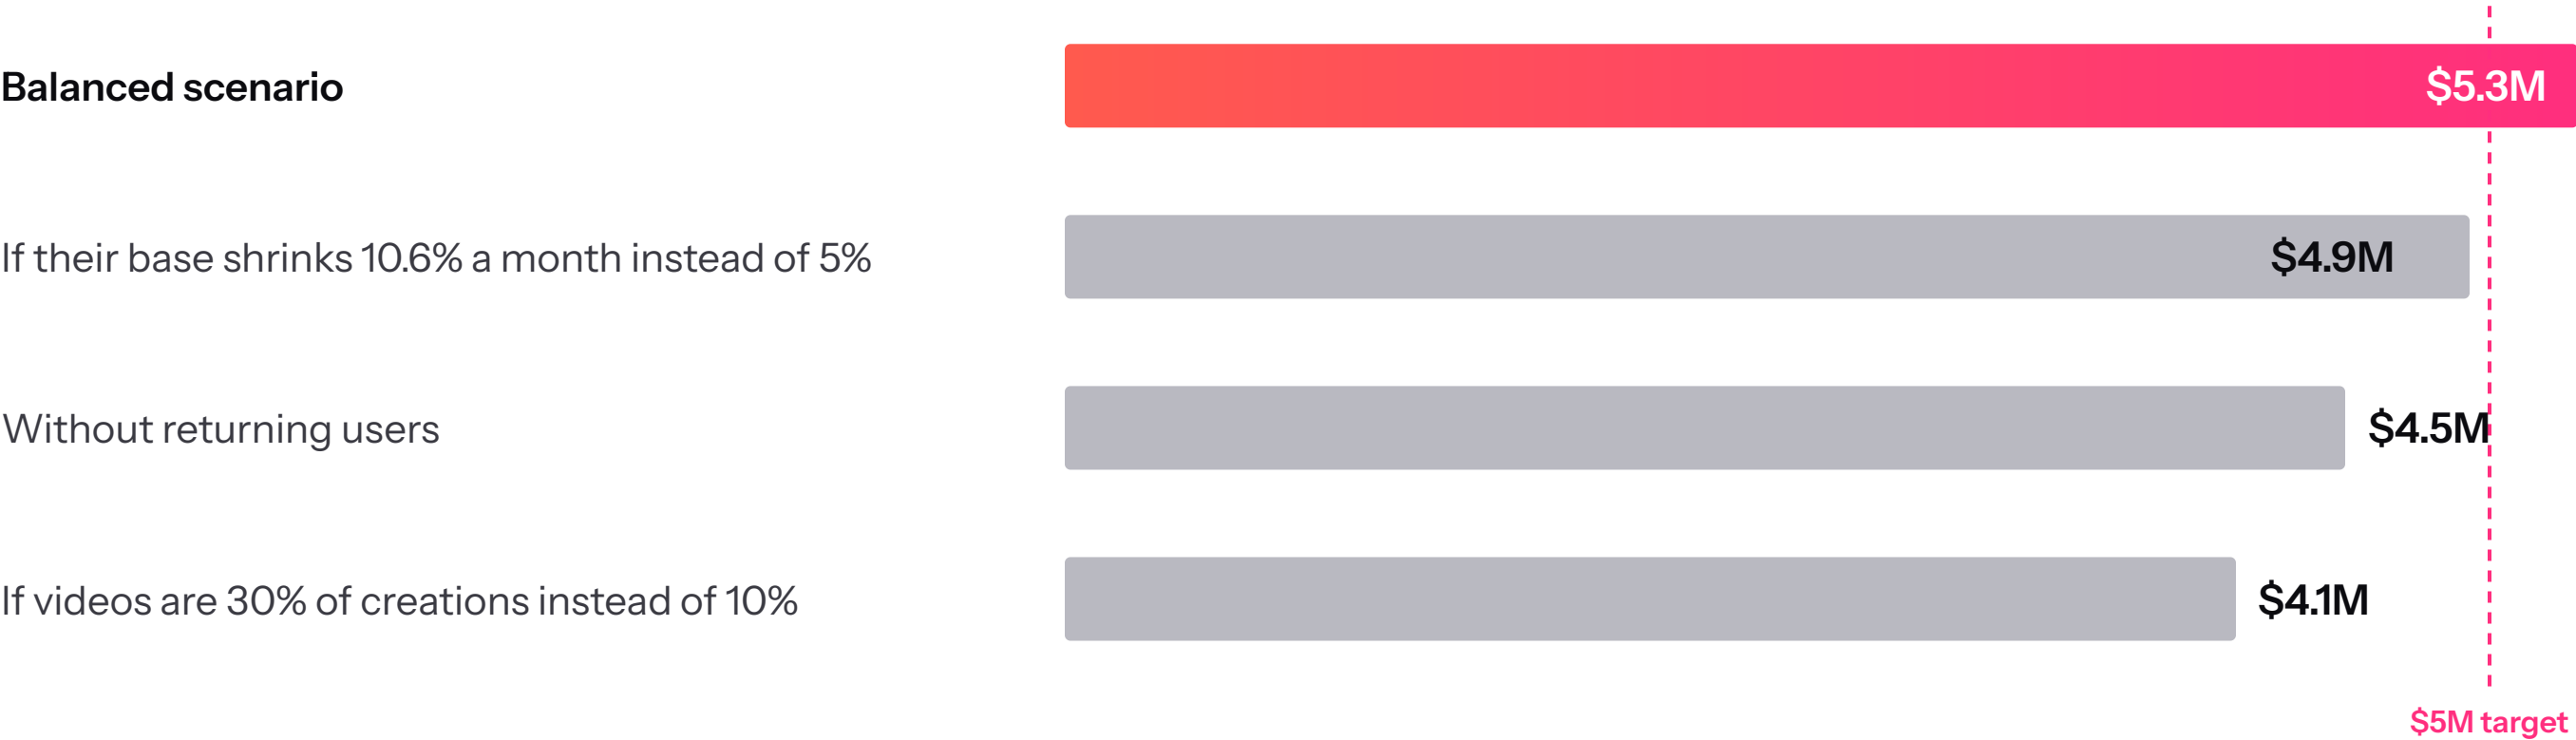

NUMBER	VALUE	SOURCE
Daily / monthly active users	15M / 100M	Brief
Installs	350,000 a day	Brief
Installs starting a free trial	5% (60% of trials at onboarding)	Brief
Trials converting to paid	20%	Brief
Weekly price / revenue per subscriber	\$5 / \$20, so about 4 paid weeks	Brief
Downloaders who enhance / generate	90% (6 photos) / 20% (1 item)	Brief
Free allowance · ads	5 enhancements and 5 generations · \$0.005 per ad	Brief
AI Photos	Trial start +20%, conversion unchanged, the lift lasted	Remini team
Comparable apps	24.3% median trial-to-paid, weekly plans with 5 to 9 day trials	RevenueCat 2026

Usage growth and invites behind each scenario

	TRIAL RUSH	BALANCED	ENGAGED
Enhancement usage with Studio	+25%	+50%	+75%
AI creation usage with Studio	+15%	+30%	+50%
Invited installs per 100 trial users	5	5	8
AI cost per trial (today \$0.44)	\$0.51	\$0.60	\$0.71
Margin after AI cost (today 89%)	86.6%	85.7%	84.3%
Bar for the target at this margin	+15.1%	+16.0%	+17.9%

The Balanced scenario depends on returning users, the least evidenced input

NPV over 2 years, Balanced scenario, \$M, against the \$5M target
